PROFILE

Highly passionate about the world of Information Technology. Enthusiastic about learning new things and enjoys collaborating with others in a team environment. Currently exploring AI engineering.

WORK EXPERIENCE

- **Yue Shop – Tuban, East Java** Jan 2025 – Mar 2026
Owner
 - Operated an online digital store specializing in game top-ups and app purchases.
 - Handled vendor relations, customer support, and order fulfillment.
- **Orderfaz – Bandung** Mar 2022 – May 2024
Software Engineer
 - Lead, mentor, and manage a high-performing backend team, fostering a collaborative and results-driven work environment.
 - Review backend code contributions from team members.
 - Deploy and maintained backend and frontend servers.
 - Perform maintenance, bug fixing, and application development for Orderfaz and partner apps such as Apikurir.
- **Nashta Global Utama – Jakarta** Jun 2021 – Dec 2021
Backend Developer
 - Handle maintenance, bug fixing, and development of the 2nd generation SINSW system.
 - Contributed to applications such as the Pemberitahuan Jasa Kawasan Ekonomi Khusus (PJKEK) and Sistem Nasional Neraca Komoditas (SINAS NK).

PROJECTS

gitSdm — A visual tool for mapping repository structure, dependencies, and the connections between files. Built with React, Vite, Bun, and AI integrations.

pia-scrap — From web content to your reading list. A Python scraper that collects content and brings it into a cleaner EPUB workflow.

keking — A Discord music bot with playback commands and community utilities. Built with TypeScript and Docker.

novelpia-reader — A desktop reader and command-line downloader for Novelpia novels, with offline reading, background downloads, and EPUB export. Built with Rust, Tauri, and React.

sketchbook — A single-page art timelapse portfolio for sketches and finished pieces. Built with React, Vite, and Tailwind CSS.

pixeldrain-bypasser — A batch downloader for Pixeldrain albums and lists, with resumable downloads, completed-file skipping, and download status tracking.

porto — The portfolio site itself: an interactive terminal, filterable projects, and GitHub activity. Built with Next.js and Tailwind CSS.
